

Digital signage refers to the remote-controlled distribution and playback of various digital content—such as TV programs, advertisements, menus, and other information—across a network of displays. These displays can vary from large digital billboards to smaller screens, whether situated at a single location or spread across multiple sites. The focus is on delivering relevant information to the target audience.

Digital signage allows users to present their messages in a more dynamic and targeted manner. Sureview has showcased a digital signage application on the Android platform, which offers features such as content updates via a remote web browser, playback of video content, images, HTML web pages, and scrolling text messages
