

Digital Signage involves the remote-controlled distribution and playback of digital content—such as TV programs, advertisements, menus, and various types of information—across display networks. These displays can vary from large digital billboards to smaller screens, positioned either in a single location or across multiple sites. The goal is to engage the audience with pertinent information. Digital signage allows for dynamic and targeted message delivery.

Sureview has showcased a Digital Signage application on the Android platform. This app offers features such as updating content via a remote web browser and supports playback of video content, images, HTML web pages, and scrolling text messages.
